

Nexign Converged BSS

Nexign Converged BSS is designed for operators interested in consolidating different lines of business, technologies, and payment methods on a single platform.

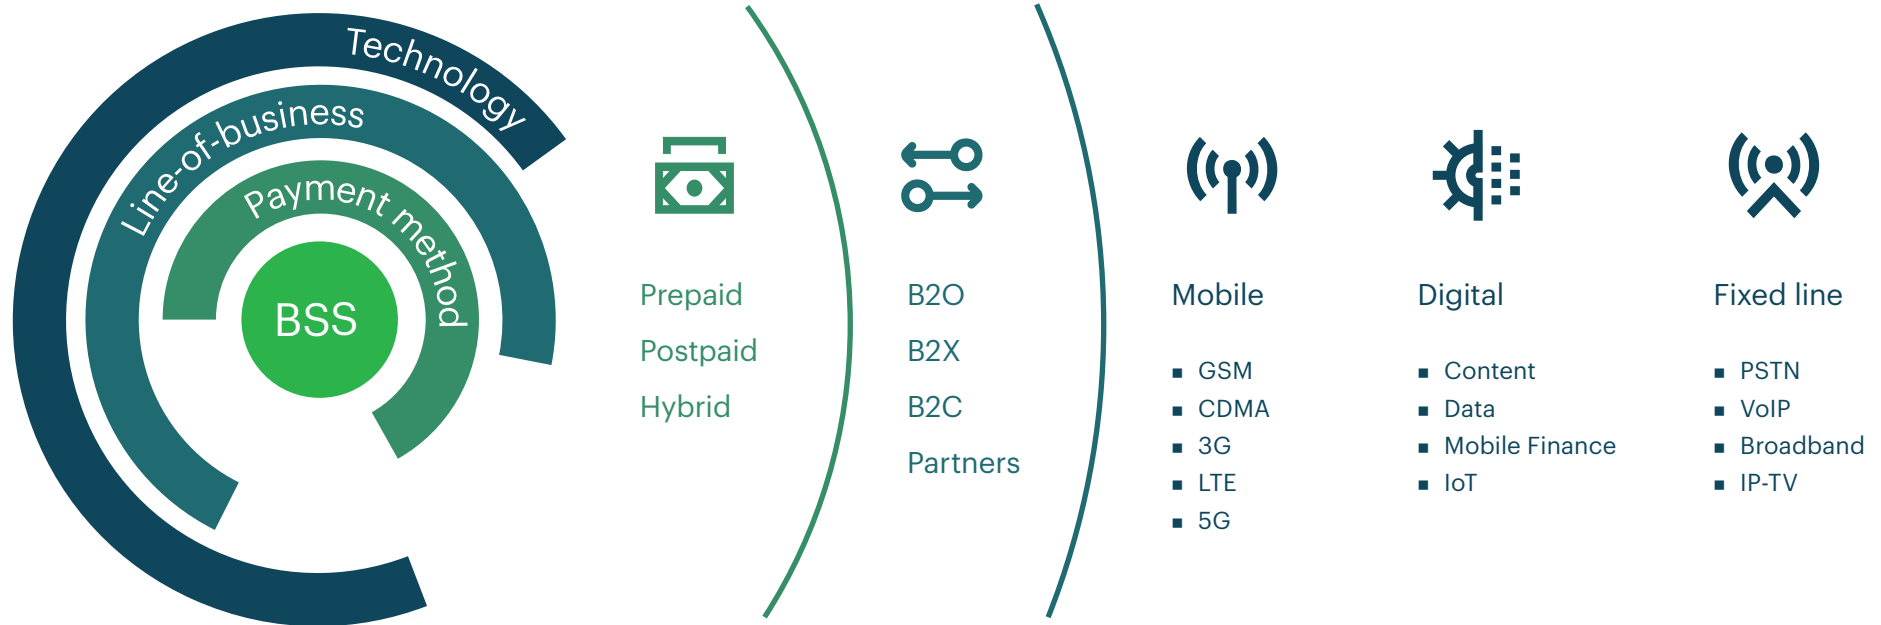

This approach allows to optimize their business processes and expand the product line with converged packages including home internet, TV, PSTN, and mobile.

Nexign Converged BSS supports new technologies such as 5G and eSIM, enabling the provider to unlock new monetization opportunities and explore new business scenarios.

Nexign Converged BSS

An end-to-end BSS solution to consolidate operators' systems and expand product portfolio with converged packages

Nexign Converged BSS Capabilities

All-in-One BSS

- End-to-end solution from a single vendor
- Full convergence by design
- Pre-integrated modules allowing customized workflow configuration

Real-Time Core

- Billing flexibility across account hierarchies
- Simple and complex product offerings and flexible payment mechanisms
- Built-in tools for revenue leakage prevention

Openness and Transparency

- Open API and integration interfaces
- Transparent delivery process and shared knowledgebase
- No vendor lock-in

Ability to Execute

- Agile delivery reducing time to service
- No downtime during software upgrades
- Managed Services for efficient business operations

Transformation Technologies

- Monetization of 5G use cases
- eSIM support
- Service exposure via integration with Nexign IoT platform

Performance Indicators

- Track record of executing successful BSS transformation projects for more than 50 telecom operators
- High-performance engine completing billing cycle for the whole subscriber base in 12 hours
