

Nexign Digital BSS

The evolving 5G ecosystem is rising new value chains and presenting an opportunity for telecoms operators to open up revenues beyond connectivity services.

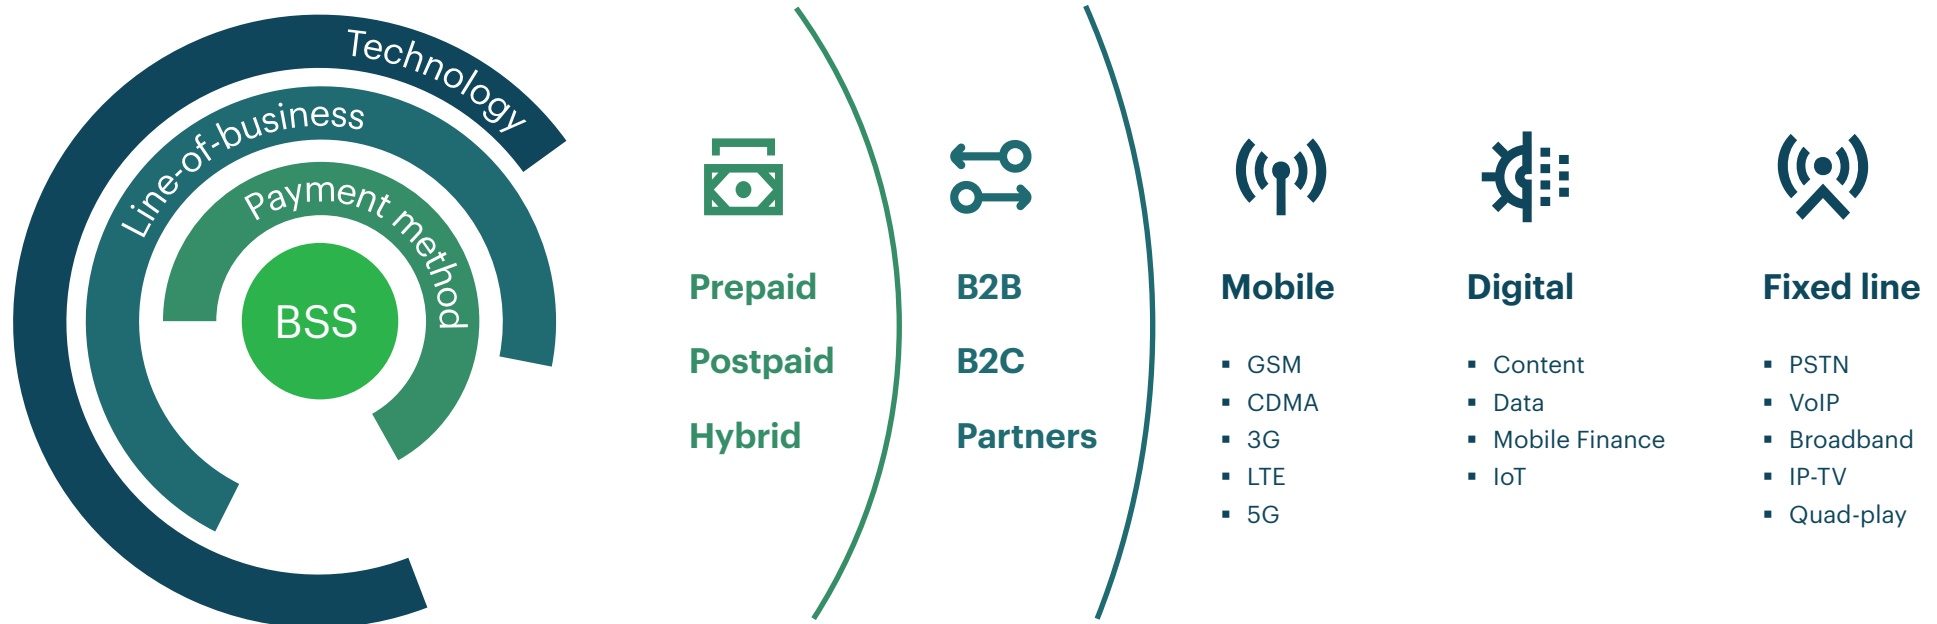

As a fundamental technology defining the CSPs' digital transformation 5G is pushing the demand for multidimensional convergence onto center stage.

A convergent Nexign Digital BSS platform enables rapid launch of emerging services to embrace new monetisation opportunities and deliver a transformational experience to operators and their customers.

Nexign Digital BSS

Nexign Digital BSS brings convergent, catalog-driven charging enabling consistent user experience across all lines of business and rapid monetization of next-generation services.

Nexign Digital BSS Capabilities

Modern monetization tool to unlock 5G revenue potential

- Convergent billing
- Real-time charging
- Complex products, partner bundles, personalized offerings
- Finance products
- Mobile money and e-commerce support
- QoS-based charging
- eSIM support
- 5G-driven use cases

Architectural agility to rapidly explore new business models

- Centralized product configuration and catalog-driven charging
- Streamlined order fulfillment
- Digital API expanding the number of customer touch points and enabling omnichannel experience
- Efficient microservices and Kubernetes-orchestrated architecture with continuous delivery pipeline
- ODA design principles

Innovation frameworks

- DevOps joint development ensuring end-to-end collaboration
- Transparent delivery process and shared knowledge base
- FastTrack coordination throughout the deployment and migration lifecycle

Ability to execute

- Business and operational transformation
- On-time and on-budget project execution
- Tier 1 CSP complex transformation experience

Nexign Digital BSS Architecture
